

LightningScan[®] GS

***New Desk Accessory Version 1.2
Software Update***

About LightningScan GS Desk Accessory Version 1.2

This sheet explains the changes between the latest desk accessory software (version 1.2) and the original software (version 1.0) as described in the **New Features Update Desk Accessory Guide**. Version 1.2 of the LightningScan GS Desk Accessory (DA) incorporates many new features suggested by users. As always, we welcome your comments and suggestions about our software.

The most significant changes found in version 1.2 of the DA are:

- Support for the Apple IIgs Clipboard.
- An option for instantly starting a new scan after scanning once.
- The ability to scan line art images much smaller.
- A revised Save dialog box.

Apple IIgs Clipboard Support

The LightningScan DA supports the Apple IIgs Clipboard to copy selected areas of scanned images. To copy an image to the Clipboard:

- Scan an image using the DA.
- Scroll the image by pressing the mouse button and moving the mouse. Position the area you wish to copy on screen.
- Press the C key for copying.
- The cursor changes from an arrow (↖) to a crosshair (+).
- Position the crosshair on the upper left part of the area you wish to copy.
- Press the mouse button and drag the mouse to the lower right part of the image to be copied.

After releasing the mouse button, the selected area is copied to the Clipboard. The area is ready to be pasted into any program that supports the Clipboard.

Important note: Many programs do not support the Apple IIgs Clipboard. Try it with your favorite programs to see. Images pasted into color painting and page layout programs will be converted from grays to color, depending on the palette. To restore gray shades, set the color palette to gray.

Starting a New Scan

After scanning once, you may want to scan again. Press the N key to start a scan while using the DA. If the image displayed has not been saved (or copied to the Clipboard), a dialog box will appear:

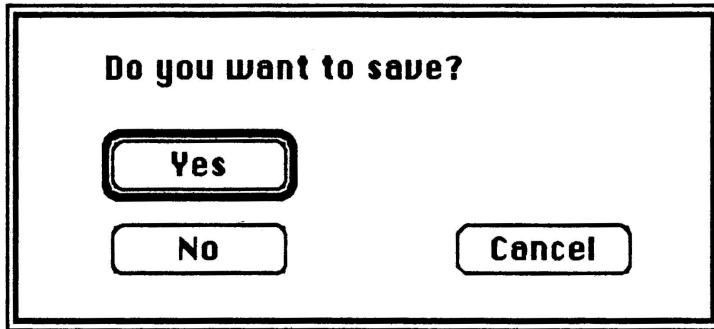

Figure 1: The Save Changes dialog box.

Click on the Yes button (or press the Y key) to save the image. If you don't want to save, click on the No button (or press the N key) to ignore the image. The new scan dialog box will then appear with options for your new scan.

Line Art Scanning

The size of images scanned in the line art mode (within 640 mode programs) has been reduced. When scanning in 640 mode programs, line art images match the size and resolution of gray scale images. When scanning in 320 mode programs, line art scanning will take more memory and images will be larger.

Revised Save Dialog Box

Images are automatically saved in the mode of the program being used. The 320 and 640 mode buttons no longer appear in the Save dialog box.

The Help Screen

Press any key (except B, C, N, S, Q, and ESC) to display the Help dialog box:
